Kuwait Int'l Airport (KWI/OKKK) New ICAO Code

Introduction

As of the start of the last AIRAC, Kuwait International Airport changed their ICAO code from OKBK to OKKK.

The BAV database has been updated to this effect but some references to the old code still exists until I clarify with the tech team about a few backend problems that could arise.

If you use eurocontrol validation of your flight plans these will NOT validate with the old or new codes as it has only just been picked up, it will start working again with the next AIRAC on 23 March. In the mean time you will need to replace OKKK with ZZZZ and use DEP/OKKK or DEST/OKKK in field 18 of the flightplan as applicable. If you use it as an alternate you will need to use ZZZZ and ALTN/OKKK.

The Kuwait OM C entry is revised to incorporate this information.
